

GRIDLOCK AI

AI-Powered Parking Intelligence & Patrol Optimization Report

Executive Summary

Total Violations Detected: 287,095

Total Hotspots Identified: 223

High Risk Zones: 1

Highest Priority Hotspot

Location: BTP082 - KR Market Junction

Police Station: Upparpet

Violations: 76,482

Top 5 Hotspots

- BTP082 - KR Market Junction - 76,482 violations
- Vijayanagara Area - 45,179 violations
- BTP051 - Safina Plaza Junction - 32,228 violations
- HAL Old Airport Area - 17,784 violations
- Kodigehalli Area - 6,212 violations

AI Recommendations

- Deploy additional officers to high-risk hotspots.
- Prioritize emerging hotspots before congestion spreads.
- Use optimized patrol routes for maximum coverage.
- Monitor uncovered risk zones identified by the dashboard.
- Increase patrol frequency during peak traffic hours.

Conclusion

GRIDLOCK AI provides actionable intelligence for police departments by identifying parking-related congestion hotspots, recommending patrol deployment, optimizing routes, and predicting traffic impact. The system enables proactive enforcement and improved urban mobility.
